

**Sasolwax**

# Wick Wax

## Sasolwax 6303

---

### ***Sasolwax 6303 is an ideal all-round wick wax for use in pillar, votive candles and tea-lights***

- A high percentage of malleable components lend this product its excellent flexibility when cold.
- Very smooth and supple wick strands are produced with it.
- Waxed wicks remain flexible, even in low temperatures. Broken wick strands e. g. during handling or mechanical insertion, are thus avoided.
- The production of lighting wicks is possible with *Sasolwax 6303*.
- A particularly low cloud point (67 / 65 °C) supports energy saving production.

The clear and cloud points of *Sasolwax 6303* are very close together so it is not necessary to bring the material up to a high temperature in the melting procedure.

Application can commence immediately once the clear point has been reached.

The temperature during application should be between 70 - 80 °C.

*Sasolwax 6303* is available as pastilles.
